

WHAT SAVED HER LIFE

Mrs. Martin Tells About a Painful Experience that Might Have Ended Seriously.

Rivesville, W. Va.—Mrs. Dora Martin, in a letter from Rivesville, writes: "For three years, I suffered with womanly troubles, and had pains in my back and side. I was nervous and could not sleep at night.

The doctor could not help me. He said I would have to be operated on before I could get better. I thought I would try using Cardul.

Now, I am entirely well. I am sure Cardul saved my life. I will never be without Cardul in my home. I recommend it to my friends."

For fifty years, Cardul has been relieving pain and distress caused by womanly trouble. It will surely help you. It goes to the spot—reaches the trouble—relieves the symptoms, and drives away the cause.

If you suffer from any symptoms of womanly trouble, take Cardul.

Your druggist sells and recommends it. Get a bottle from him today.

"BAD TEETH MAKE BOYS BAD"—HILLES

Quotes Figures on the Decayed Roots of Evil.

TOOTHBRUSH AS A REMEDY.

President of New York Juvenile Association Asserts That the Dentist is the Greatest Influence For Good in the Land—Sick Boys Are Bad, and Bad Teeth Make Boys Sick.

New York.—Charles D. Hilles, chairman of the Republican national committee and president of the New York Juvenile association, says he believes that much of the so called badness in boys is due primarily to decayed teeth and the consequent inability to masticate properly their food. He bases his conclusions on observations of boys sent as delinquents to the Children's Village at Dobbs Ferry, N. Y., where an average of 550 youngsters are getting a chance to become good citizens.

Mr. Hilles declares that 91 per cent of the boys received suffer from bad teeth and that after two years of care with a dentist, together with practice in the gentle art of using a toothbrush, the boys are turned out 90 per cent good instead of 90 per cent bad. Therefore Mr. Hilles, who has long devoted himself to the reformation of children who haven't had half a show in life, says he is convinced that the dentist is, after all, the real kind of doctor that

CHARLES D. HILLES.

the great majority of "delinquent" boys need in the straightening out of tummy troubles and other physical disorders that have a tendency to start them on the wrong moral slant.

"Acting upon the premise that the bad boy is generally a sick boy," Mr. Hilles said, "we determined some time ago to maintain a thorough physical study of the youngsters sent to us. We found our boys to be sick. Sixty-five per cent of them were anemic—the result of poor food and irregular habits of living. To this half starved condition could be attributed the waywardness and viciousness of the boys.

"We found that more than 90 per cent of the boys—and remember they are all under fifteen years of age—came to us with bad teeth. For years these boys have been unable to chew their food properly. They have acquired the habit of bolting everything they put into their mouths. The natural consequence has been multiplication of stomach and intestinal disorders. The boys were dragged down in a physical manner and really through no fault of their own became physical degenerates and moral delinquents."

Mr. Hilles said the first investigation dealt with 634 boys, of whom fifty-two, a little more than 8 per cent, were free from some kind of physical abnormality. The examinations proved that most of the troubles from which the boys suffered came from the teeth.

"Immediately upon admission to the Children's Village," he continued, "the boy is sent to the dentist, who makes a searching examination of his teeth. All possible repairs are made, hopelessly decayed teeth are extracted, those less seriously diseased are filled and crowned. Finally there is a thorough cleaning of the teeth. Then the boy is sent to his room with a toothbrush and with paste. He experiences so much relief and experiences it so quickly that he always the boy is glad to give to his teeth the necessary attention.

"Regularly every six months each boy in the village visits the dentist. Never again as long as he is with us is he permitted to suffer because his teeth lack attention.

"By the time the boy has completed his two years in the Children's Village—that is the average length of his stay—he has approached the average for his years in size and in weight. Every spring the village sends a squad of boys into the west, where amid new surroundings and forgetting the stigma of the past they begin a useful life in the open country. Remembering that about 91 per cent of the boys are subnormal when they come to us, that they are moral delinquents, physical degenerates and mental defectives, it is a thorough demonstration, I believe, that we are right when we say that the dentist is the greatest influence for good known to us, that more than 90 per cent of our boys make good and are successful after they leave us."

PROTECTION FOR "GENIUS."

Inventors of "Perpetual Motion" Will Be Saved Patent Fees.

Washington.—Owing to the growth in numbers of inventive "geniuses" who declare that they have solved the perpetual motion problem the officials of the patent office have had to take steps to protect them.

Any one can make an application for a patent, paying a fee of \$15. An examiner investigates the claim and, if there is merit to it, calls for a model. If there is no merit the patent is then rejected and the \$15 goes into Uncle Sam's treasure chest. Nearly every one of these perpetual motion inventors is in financial straits. The loss of \$15, according to the officials, is a severe blow to them financially. Hereafter the patent office will not permit any one to file a patent for a perpetual motion machine unless the application is accompanied by a model of the machine, the model being one that will perform. A circular to that effect is being sent out.

"It would keep two stenographers busy practically all of the time writing to would be inventors of perpetual motion machines," said Chief Clerk Woodard recently. "The circular saves time and saves money for the government, meanwhile saving money for the poor fellows who believe they have solved this problem."

There is at least one visitor a day to the patent office who has a perpetual motion machine.

VACCINATE OR GET NO CASH.

Minnesota Indians Must Be Examined Before Government Pays Them.

Bemidji, Minn.—The ninth installment of a fifteen installment treaty, made by the United States government with the Red Lake Indians, is now being paid at the reservation, and 1,470 Indians will participate.

The per capita payment is \$61.75, which is a slight increase over last year. The total amount to be paid at this payment is approximately \$91,075, two-thirds of which has already been paid.

Prior to securing his payment each and every Indian must submit to an examination by the agency physician, who keeps a card index of all patients. If he finds any one who ought to be vaccinated he completes this work before payment is made to him.

MEAL OF 1,000 HEAT UNITS FOR 10 CENTS

Reducing Cost of Living by Scientific Measures.

New York.—A scientific restaurant where one may obtain enough nutrition for 10 cents is to be opened here. It has been scientifically demonstrated that enough properly balanced food to keep an average man in good condition is not expensive.

The food which it is proposed to serve at this restaurant for 10 cents contains enough calories (heat units) for an average person doing light work. Professor Graham Lusk of the department of physiology at Cornell medical college has arranged the menu, based on the assumption that persons engaged in different kinds of labor require different amounts of calories.

A man who lies abed twenty-four hours requires only 1,080 calories a day; a rider in a six day bicycle race requires 10,000 calories. A man abed for eight hours and in a chair fourteen hours and having moderate exercise for two hours requires 2,500 calories. The average farmer needs 3,500 calories.

The meal which will be served at this scientific restaurant will give exactly 1,000 heat units, enough for a luncheon for a man doing light work.

Professor Lusk has arranged this menu, giving 1,000 heat units for 10 cents:

7½ ounces of beans.
1 ounce of pork.
21-3 ounces of butter.
5 ounces of milk and 5 ounces of coffee, mixed.

Three such meals mean 3,000 heat units, and if one eats a heavier meal in the evening with this scientific luncheon of beans and pork he will obtain enough calories for anything less than hard physical labor.

LIVES MONTH IN BEER CAR.

Cat Had No Food, and His Ribs Showing, but He'll Recover.

Vancouver, B. C.—Out of a box car of beer that arrived here yesterday there walked the shadow of a once robust tomat.

Pussy's ribs were showing, and he was so weak he could hardly move toward a bowl of milk that kind hearted customs officers at the Canadian Pacific wharf quickly provided for him. The cat was sealed in Milwaukee thirty days ago, and the big cat had no grub since. He will recover.

Mountain Lion Killing Elk.

Fort Collins, Colo.—A mountain lion is reported to be slaughtering the elk shipped into Est. park by the government a short time ago. Four or five elk were killed there recently and carried away bodily. The fact that there are no traces of dragging leads trappers to believe that an enormous lion is doing much of the killing. Forest rangers in the park are searching for the beast.

FOLLOWERS LOYAL TO PANCHO VILLA

Federals See In Chief an Outlaw, His Men a Soldier.

REBEL ARMY WELL DRILLED

Leader Is Uneducated, but Not Ignorant—Was Once an Outlaw With Price on His Head, but No One Ever Claimed the Reward—Learned to Read and Write While in Jail.

Holloway, N. M.—General Francisco Villa, easily the most prominent figure of the Mexican revolution, on its fighting side at least, has naturally been a subject for more writers than any other man. Much that has been written is true, but on the other hand much misinformation has been distributed in the United States.

Christened Francisco by his parents but more often called "Pancho" by his friends, Villa early in life followed his Latin-Indian instincts to overcome his discretion, and he killed a Mexican officer who had induced his sister to elope. He was outlawed and shortly was considered the most desperate outlaw with which the authorities had to deal.

The federal and state governments finally put a price of 20,000 pesos upon his head because he was making open war upon the men running the state government. The rurales were put in the field to capture him and during a number of years fought him more than forty times, wounding Villa nine times and suffering a loss of thirty-nine killed. This result discouraged head hunting in official circles to such an extent that Villa operated for some time almost unmolested.

As is common in Mexico, Villa conducted his operations as a "revolutionist." He drove off the herds and took liberally of the stores of the rich supposed to be friendly with the state ad-

GENERAL VILLA'S LATEST PICTURE, MADE FOLLOWING BATTLE AT SALTILLO.

ministration. He is known to have distributed his plunder to the poor of his district.

Villa is uneducated, but not ignorant, unless the record he has made is all a dream.

When Madero camped his rebel army before Juarez he was immediately joined by Villa, who had hastily gathered more than 500 men and marched them overland. His military ability was in evidence even then, as on his march he had made it a point to acquire a number of 30-40 rifles, and he had the only squad in the entire army capable of fighting his enemies on equal terms with the Mauser rifles.

Villa gave Madero some trouble because of his desire to go right into Juarez and fight it out, and he finally did that very thing against the wishes of his more timid chief. When Madero saved the life of General Navarro from Villa and Orozco by a shrewd trick the latter became deeply offended, but Villa looked upon the move as legitimate and liked Madero all the more for it.

Madero pardoned Villa for all past offenses and put him in his army when he assumed the presidency. Huerta was Villa's commander, and that officer ordered Villa shot for some alleged offense. Madero ordered Villa to the penitentiary near Mexico City and gave the opportunity of escaping. While confined Villa learned to read and write a little. Here are some of his achievements as his friends look at them:

He has drilled his army and provided for it through his own efforts until it is admitted that he has the best drilled and equipped force in Mexico.

He has captured more than one-half the total artillery in Mexico and has formed an efficient artillery division.

He buys hay and grain and ships it to his cavalry and keeps that arm of service in a more efficient condition than do the federals.

He has the best hospital corps in Mexico and gives better care to his wounded than does the regular army.
